Comments

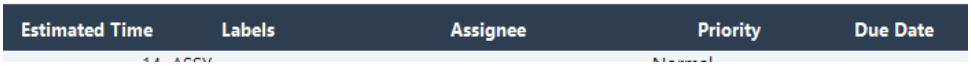

- There is no "BOM/WT" option. This will create issues when importing to Asana. Use either "BOM" or "WTPART" labels.

- No "Blocked" status option. "On Hold" and "Backlog" missing.

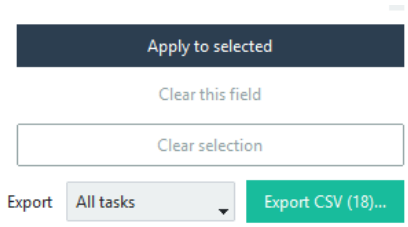

- Verify Column Header names. They should match Asana in name and capitalization to avoid creating new columns accidentally. Example: If CSV has "Estimate Time" and Asana "Estimate time", Asana import tool will think they do not match, creating an additional column. (Similar case to when importing options not in the available list).

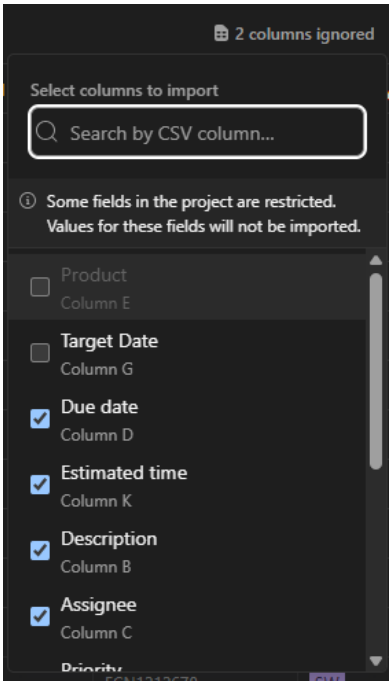

- Maybe a button or a "Apply to all" can be good. Same with a "Clear All". "Select visible" button should be in a Box.

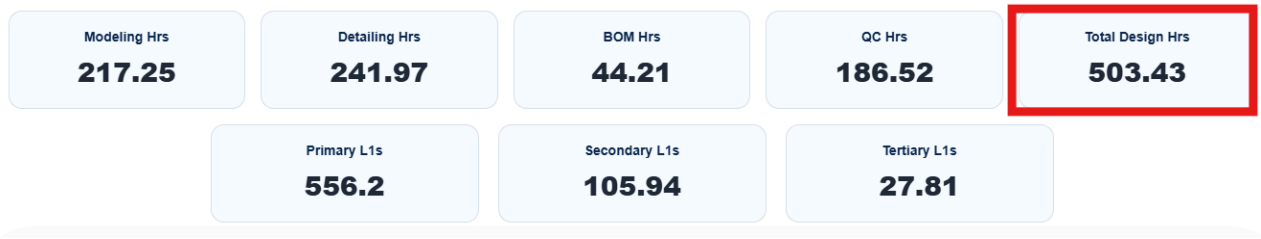

Select visible

- ○ Check possibility of using the API to upload to Asana directly from app instead of manually uploading CSV.
- ○ Check if saving the current tasks and its fields can be saved to share or for traceability.
- ○ "Product" and "Target Date" are not included in the import. "Target Date" can be added back by selecting manually, "Product" column cannot. Remove "Target Date" field, as new Asana rule locks the column and cannot be uploaded in the import.

- ○ Total of Estimated Time in tickets does not match the total provided by the Hour Estimator. What is the logic behind the upload of values that causes this issue?

- ○ Can we set the timeline of the project in the Due Dates? Use the amount of hours as a basis of the project and tasks to set specific Due Dates to each task, considering the 6 hrs project workload per day.
